## PROFESSIONAL SUMMARY

Software Engineer and Full-Stack Developer with hands-on experience building and supporting live enterprise GRC software for real business and compliance processes. Experienced across KPI Management, Internal Audit, Risk Management, and Regulatory Compliance, with practical exposure to GRC concepts, ISO-based compliance practices, complex business workflows, and client requirements. Comfortable working under pressure, collaborating with technical and business teams, troubleshooting issues, and translating complex requirements into reliable software solutions.

## CORE COMPETENCIES

**Enterprise GRC:** Governance, Risk Management, Compliance, KPI Management, Internal Audit, Risk Management, and Regulatory Compliance.

**GRC & ISO Standards:** Practical understanding of GRC processes, controls, audit workflows, and ISO-based compliance requirements.

**Business & Requirements Analysis:** Translating complex business and compliance requirements into practical software workflows and solutions.

**Client & Stakeholder Collaboration:** Exposure to client meetings, requirement discussions, feedback handling, and coordination with product and technical teams.

**Problem Solving Under Pressure:** Comfortable handling changing priorities, troubleshooting complex issues, and delivering reliable solutions under tight deadlines.

## PROFESSIONAL EXPERIENCE

**Software Engineer** | Jethur Innovations Pvt. Ltd.

October 2025 – Present

- Engineered production-ready backend services for a live enterprise GRC platform using **Golang, Gin, MSSQL, and GORM**, designing secure REST APIs to drive complex multi-stage approvals and Role-Based Access Control (RBAC).
- Architected and delivered the KPI Management module, featuring a complex, data-intensive dashboard for real-time metrics. Built the underlying automated calculation engines, optimized APIs, and threshold evaluations to replace manual tracking with structured digital workflows.
- Developed core functionality for Internal Audit & Compliance Management, structuring scalable APIs and relational database schemas to handle audit execution, real-time validations, and automated notifications for regulatory workflows.
- Translated ISO-based compliance standards directly into backend software rules, ensuring all business logic strictly adhered to governance, risk, and control mandates.
- Collaborated directly with clients and product managers to define technical scope, troubleshoot production issues under tight deadlines, and adapt architecture to shifting business priorities.
- Optimized backend performance and data access patterns, improving API efficiency and database operations across data-intensive GRC workflows while maintaining scalability and reliability for production workloads.
- Implemented workflow automation and business-critical integrations, including scheduled processes, notifications, validations, and data-driven workflows that reduced manual intervention and improved traceability across GRC operations.

## ADDITIONAL PROJECT EXPERIENCE

- Bella Imagine — Photographer Booking & Community Platform:** Built a full-stack platform connecting photographers and clients across India with booking and community features.

## EDUCATION

Higher Secondary (+2) — Commerce Computer Application

## CERTIFICATIONS & ADDITIONAL LEARNING

- MERN Stack Development Intensive** — Brototype
